

System Requirements

A complete AppletVIEW™ 4.0 system consists of a server running your LabVIEW application and the AppletVIEW VIs, and one or more clients using web browsers. The AppletVIEW™ 4.0 system requirements are broken down as follows:

LabVIEW Server Requirements

The system requirements for running the LabVIEW server components of AppletVIEW™ 4.0 are:

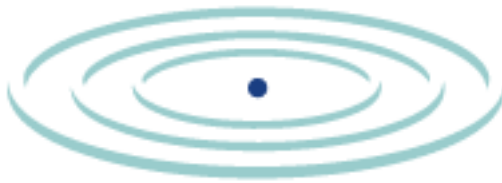

- * LabVIEW 6.0 or higher
- * TCP/IP protocol installed on server machine
- * About 8 MB of hard drive space for AppletVIEW™ VIs and files

Note: No Java tools or the JDK (Java Development Kit) are necessary on the LabVIEW server.

Client Requirements

Any web browser capable of running Java 1.1 applets can be used for a client. Examples of such web browsers are:

- * Windows (95 and up)
 - Netscape Communicator version 4.05 or higher
 - Microsoft Internet Explorer version 4.01 or higher
- * Mac OS systems (System 7.5 or later)
 - Apple Safari
 - Netscape v.6 or higher
 - Microsoft Internet Explorer version 4.0 or higher
- * Unix
 - HotJava 1.1
 - Netscape Communicator 4.05 or higher

we connect all sorts of things to the web

4-2

Microsoft Internet Explorer 4.01 or higher

Mozilla

Note that there are other browsers or applications that may support Java 1.1; only Netscape and Internet Explorer, however, were tested with AppletVIEW™.
